Constructing a New Drive Shaft

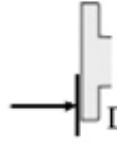

This sheet applies to cars, 4 x4's, light duty trucks and high performance vehicles.

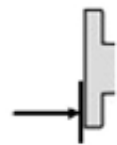

One of the diagrams below should apply for your application. Measurements must be taken with weight on suspension to determine the proper working length.

* Transmission type?  **A**  Differential type? _____

* Transmission type?  **B**  Differential type? _____

* Transmission type?  **C**  Differential type? _____

* Transmission type?  **D**  Differential type? _____

* Transmission type?  **E**  Differential type? _____

_____ A—Measure from tip of splined transmission output shaft to flat of flange rear differential

_____ B—Measure from tip of splined transmission output shaft to outside tip of differential yoke

_____ C—Measure outside tip of transmission yoke to outside tip of differential yoke

_____ D—Measure from flat of transmission flange to flat of flange rear differential

_____ E—Measure outside tip of transmission yoke to flat of flange rear differential.

* Yes No If the trans is a TH400 is the spline drilled and threaded at the end of the output shaft?
